

AquaVita Energized Water Improves Organ System Function

The GDV Diagram program analyzes the state of organ function. Data is represented graphically and numerically. The circle colors indicate balance in organ function: green=normal, pink=negative energy, yellow=excess energy. Negative numbers represent negative energy and positive numbers indicate energy flow. The red lines show organ function before AquaVita water consumption and blue lines indicate organ function immediately after drinking AquaVita water.

As shown, AquaVita Water improves energy flow to organs and removes most negative organ function.
