

Drinking AquaVita Water Increases the Biofield

Subtle Energy Field before.

Subtle Energy Field
after drinking AquaVita water

These images are computer generated representations of the finger corona discharge patterns produced by high-voltage electrophotography taken with a Gas Discharge Visualization Camera (GDV). GDV is a Russian technology that assesses the subtle energy available for metabolic processes in the body. The larger the area of color around the body and the more filled in it is, the better the overall state of health. The image on the left was taken before consumption of purified tap water and the one on the right was taken immediately after the person drank water that had been run through the AquaVita Energizer. The area of the biofield increased from 18,929 to 27,361 and the symmetry (level of organization) increased from 83% to 96%.

The significant increase in the area and symmetry of the Subtle Energy Field after AquaVita water consumption demonstrate that this water greatly improves ones energetic field related to health.
